STAR WARS™ BUILDING STEPS!

SITH EVAC DROID

Even Darth Vader can't win every battle. When he gets in trouble, a remote signal to his Star Destroyer activates the Sith Evac Droid with a single mission: to get Vader out alive! A powerful claw, high-powered cutting laser and concussion rocket blast through any obstacles between the droid and the injured Sith Lord, and an armored hyperbaric chamber and med-bay protect him on the journey back. As soon as his robotic limbs are repaired, he'll be back in the fight... and no one gets the better of Darth Vader twice!

Build the Sith Evac Droid using pieces from 7671 AT-AP Walker and 7672 Rogue Shadow!
